DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C.

121:

I. Claim 1, drawn to a sheet feeder and a transport, classified in class 271, subclass 6.

II. Claims 2-10, drawn to a sheet transport apparatus, classified in class 271, subclass 198.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as receiving and transporting any kind of sheets that do not have a controlled lead sheet path gap. Moreover, invention II has separate utility such as receiving and transporting sheets that do not have to be held to form a set before transporting to a downstream device. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 3653

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
